
# NOT ABOUT SPEED. ABOUT DECISIONS.

aira Beta 1.6

Race Your Algorithm

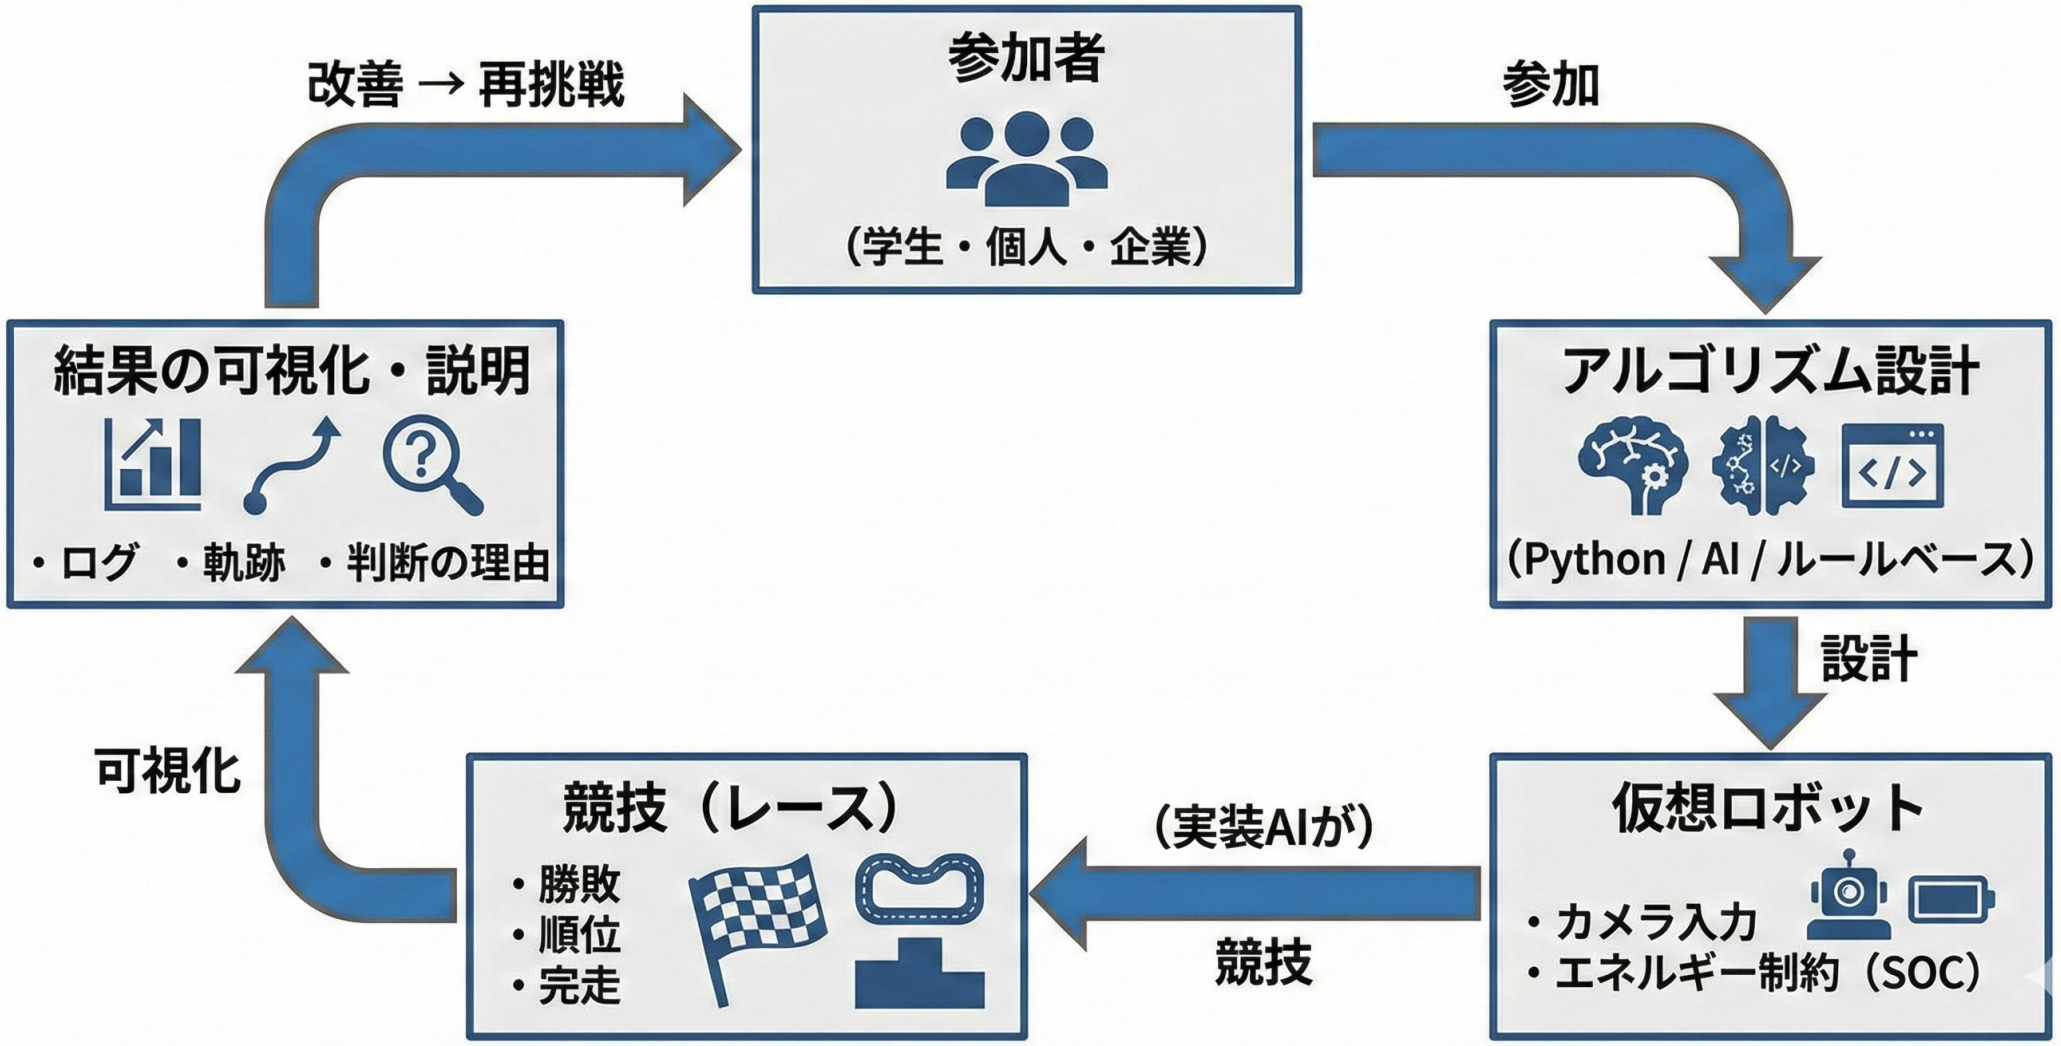
# AGENDA

1. Foundation 09:00 -10:00
2. Step by Step 10:00 -12:00
3. Rule-Based 13:00 - 14:00
4. AI 14:00 - 16:00
5. Join the Race 16:00 - 17:00

# 1-1 NOT ABOUT SPEED. ABOUT DECISIONS.

Xxxx「Issue」と「共感」

# airaｉ：競技を通じた意思決定学習の循環モデル



# 1-2 TODAY’S OUTCOME

By the end of today, you will:

- Run the system
- Read logs as decisions
- Modify one rule
- Understand where AI fits

# 1-3 WHAT WE ARE NOT DOING

- Not building a game
- Not chasing speed
- Not optimizing scores

•Not
•Not

# 1-4 WHAT WE ARE DOING

- Designing decisions
- Recording decisions
- Replaying decisions
- Delegating decisions to AI

# 1-5 LEARNING MAP (8 HOURS OVERVIEW)

- Foundation
- Manual -> Table (Experience the world)
- Rule-Based -> AI :Control the robot and racing

# 1-6 ARCHITECTURE OVERVIEW

- Unity
- ↧
- WebSocket
- ↧
- Python
- ↓
- Logs (Common Layer)
- ↓
- Modes (Manual / Table / Rule / AI)

# 1-7 MODEL AT A GLANCE

| Mode | Who Decides? |
|---|---|
| Manual | You |
| Table | Past You |
| Rule-Based | Logic |
| AI | Model |

# 1-8 WHAT IS A LOG?

- Every frame = one decision
- Decisions become data
- Data can be replayed
- Logs are the foundation of learning

# 1-9 SOC & CONSTRAINTS

- Energy is limited
- Every decision has a cost
- Constraints shape behavior
- Decisions are not free

# 1-10 LET’S OPEN VS CODE

1. Open the project folder
2. Launch VS Code
3. Locate `main.py`
4. Open the integrated terminal

# 1-11 FIRST RUN (LIVE)

Run:

python main.py

Then:

- Launch Unity
- Confirm connection
- Confirm race window appears

# 1-12 WHAT SHOULD YOU SEE?

- Race window opens
- SOC indicator visible
- Lap counter visible
- Mode indicator visible
- Robot responds to input

If yes → You successfully launched the system.

# 1-13 IF IT FAILS

Common issues:

- Python not recognized
- Port already in use
- Unity not launching
- Missing dependency

Failure is normal.

Reading the error is part of engineering.

# 1-14 WHEN YOU GET STUCK

You have two tools:

1. Read the error carefully
2. Ask the chatbot (NotebookLM)

# 1-15 HOW TO ASK GOOD QUESTIONS

❌ "It doesn't work."

✅ "When running `python main.py`, I get this error: _____"

Include:

- Exact error message
- What you already tried
- Your OS (Windows/macOS/Linux)

# 1-16 NOTEBOOKLM ACCESS

- URL provided during training
- Use it to:
  - Explain errors
  - Clarify architecture
  - Understand mode differences

# 1-17 REFLECTION

Ask yourself:

- Did it run?
- What surprised you?
- What feels unclear?
- What feels exciting?

"YOU JUST BUILT YOUR FIRST DECISION ENGINE."

# ありがとうございました
